

GT85 with PTFE

- Water Displacer
- Rust Proofer
- Won't Drip Off
- Non-Sticky
- Electrically Safe
- Deep Penetrating Action
- Longer Lasting than Others
- Metal and Plastic Finisher
- Universal Maintenance Uses
- Harness the Strength of PTFE

Working Hard in Industry and the Home

Cars, Cycles, Motorcycles, Machine Shops, Electrical, Site Machinery, Power Tools, Garden Machinery, Office Equipment, Precision Engineering, Industrial Rollers, Cogs, Conveyors, Pulleys, Shackles, Agriculture, Boats, Locks and Safes, Doors and Windows, Powerful Both Inside and Out.

GT85 The Most Popular PTFE Maintenance Spray

Unlike the usual spray maintenance products, GT85 is firstly a powerful, long term, non-sticky lubricant with PTFE. This means that moving parts remain lubricated with no oily residue to attract dirt and grit!

GT85 stays on working long after other sprays have dried or dripped off.

The PTFE in GT85 also acts as a long term deep penetrator and surface finisher for metal and plastic parts.

Available in 1Litre, non-pressurised pump packs, 200ml and 400ml spray cans.

PTFE The Magic Ingredient

Discovered by DuPont scientists in 1938, PTFE or polytetrafluoroethylene, commonly known in the Oxford English Dictionary as Teflon®, is an amazing polymer with a very low friction profile. It is used universally as a rugged non-stick coating on many everyday products.

Our Credentials

Tested and approved by the Ministry of Defence and with BS5750 and specific NATO accreditation, GT 85 is the powerful and safe lubricant spray for virtually all engineering, sport, machinery and transportation uses. GT85 is ozone friendly and non-carcinogenic, so therefore safe in use.

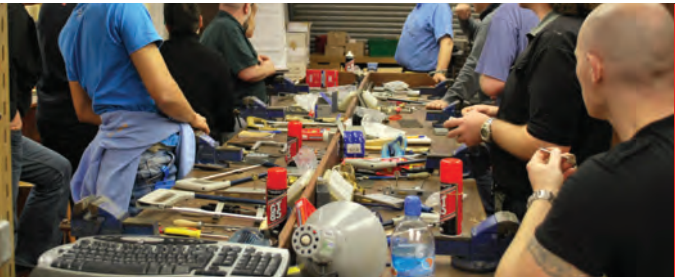

Put GT85 to the Test

Try GT85 with PTFE for yourself and compare against other so-called penetrating sprays and see how GT85 gives long-term lubrication as well. We are always interested in hearing your experiences with our products, so please email and let us know.

GT85 chosen by the Master Locksmiths

GT85 has been chosen for use in the training school of the Master Locksmiths Association. Its good penetrating action and non oily lube means it is ideal for all lock, windows and door gear.

SG85 White Grease

SG85 is a non-staining white grease for areas where long term, clean greasing is required. It is ideal for plastic contact parts as well as metal. Use where clothing or hands could come into contact, such as domestic equipment, car door hinges or sliding roofs.
